ECONOMIC DEVELOPMENTS

Global Economic Developments¹

Global economic activity is projected to decelerate from a peak of 5 percent in 2010 to 4.5 percent in 2011. The deceleration in economic activity largely reflects a transition from a rapid phase of recovery, toward a slower and more sustainable growth phase.

The rebound phase of the recovery has been slowing down since mid 2010, amid indications that global industrial production and trade had regained their pre-crisis levels.

Numerous challenges, however, continue to persist in the global economy. These include market concerns over public debt sustainability in Europe; low interest rates in high income countries, which are likely to prompt large and volatile capital flows toward developing countries and destabilize exchange rates; rising inflation in developing and emerging countries; as well as uncertainty in the trends of commodity and asset-prices. Rising international oil prices are also likely to fuel global inflation and, weigh down growth prospects in the outlook period.

The recent calamity in Japan and political disturbances in North Africa and the Middle East, are also likely to have negative ramifications on global economic growth.

The impact of the Japanese crisis is likely to be transmitted via trade flows as the supply chains in the auto, telecommunication and consumer electronic industry have been disrupted. This impact could be limited to some extent by the anticipated increase in demand for the same products in Asia, US and Europe.

Although food prices in most developing countries have not increased by as much as those measured in U.S. dollars, they have risen sharply in some poor countries; and if international prices continue to rise, affordability issues and poverty levels are likely to become more magnified.

Rising food prices may open up macro vulnerabilities, particularly for countries with a high share of food imports and limited fiscal space.

Brazil: From Aid Recipient to Donor²

Brazil has transformed considerably in the past 10 years from being a beneficiary of development aid to an international donor. Most the Brazil's donor assistance has been to targeted countries in Africa and other Latin American nations. In addition to providing financial aid, Brazil also offers high level expertise especially in field of agriculture and renewable energy sectors.

ECONOMIC DEVELOPMENTS

Under the South to South Economic Cooperation, Brazil contributed an estimated \$1 billion worth of international aid in 2010, largely in the form of technical cooperation of around \$480 million and contributions to the World Food Programme amounting to \$300 million.³

South Africa Joins the BRIC Bloc

Africa's economic powerhouse, South Africa, was admitted to the BRIC (Brazil, Russia, India, and China) grouping of emerging developing countries, a move anticipated to lure more capital flows to the country and improve trade conditions.⁴

South Africa's membership of the BRIC bloc is also expected to increase trade with the four emerging countries. The bloc presents both a huge source and market of goods and services with a combined nominal GDP of US\$12 trillion and a population of 2.9 billion.

The Sub-Saharan African (SSA) region, is expected to enjoy positive spin offs from increased capital flows to the South African economy. South African companies have a heavy presence in the continent, and their expansions will have positive knock on effects in other African economies in which they operate.

Stock Market Developments

The local bourse experienced mixed fortunes during the month of February 2011. The mining index registered a positive growth, partly due to positive developments

in international metal prices. On a monthly basis, the mining index rose by 10.3%, from 216.82 points in January to 239.08 points in February 2011.

The industrial index, however, declined by 1.3%, from 161.10 points in January to 159.04 points in February 2011. This partly reflected the current liquidity shortages that are constraining the implementation of capital projects by listed companies.

Daily average values traded also declined from US\$6.9 million in January to US\$2.4 million by end of February 2011.

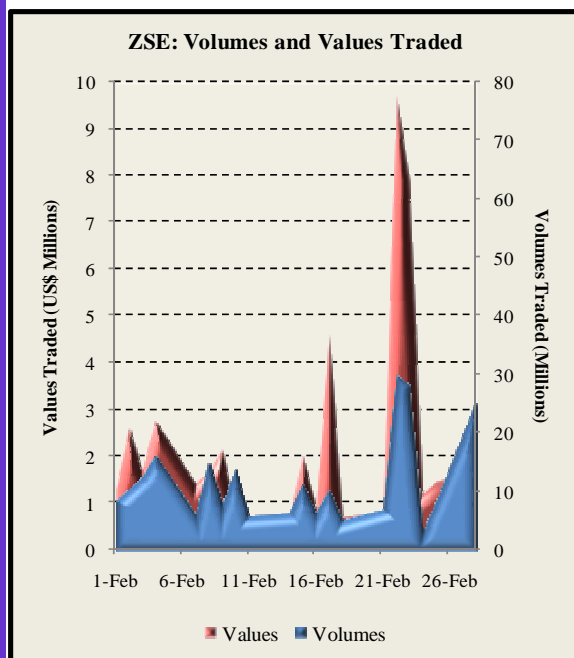

The volumes traded registered a 16.8% decline, from 14.4 million shares in January, compared to the 12 million shares in February 2011.

4. Source: Kenya Business Daily – 15 April 2011

ECONOMIC DEVELOPMENTS

The above developments resulted in the ZSE market capitalization declining by 0.8% to US\$4.1 billion by the end of February 2011. On a year-to-date basis, however, market capitalization rose by 5.7%, from US\$3.9 billion in February 2010.

Banking Sector Developments

During the month of February 2011, total deposits⁵ held by banks grew by 4.1%, from US\$2361.9 million in January to US\$2458.1 million.

On an annual basis, broad money (as defined by total banking system deposits) grew by 59%, from US\$1546.1 million in

February 2010. The growth rate, was a slow-down by 8.8 percentage points from 67.8% recorded in January 2011.

The annual broad money growth rates continue on a downward trend, largely reflecting the high growth recorded in the base months of 2010. The declining growth rates, in part, suggest some leveling off of the deposits towards some equilibrium levels.

The annual growth in monetary aggregates reflects expansions of US\$597.7 million and US\$314.4 million in term and transitory deposits, respectively. The higher growth in term deposits is partially attributable to the high opportunity cost associated with holding of demand deposits.

5. Deposits are net of interbank deposits.

ECONOMIC DEVELOPMENTS

As at end of February 2011, banks were quoting between 0.3% and 6% per year for savings and demand deposits, whilst quoting between 7% and 20% per annum for the classes of time deposits.

During the period February 2010 to February 2011, domestic credit grew by US\$1 080.4 million (130.3%) from US\$829.4 million to US\$1 909.7 million. The growth was driven by an expansion of US\$1 086.5 million (or 135.5%) in credit to the private sector. Partially offsetting this growth, was decline of US\$5.6 million in claims on public enterprises, to US\$23.6 million.

Under the Cash Budgeting System (CBS), Government has not been borrowing from the domestic market, since its expenditures are broadly matched with revenues collected.

On a month-on-month basis, domestic credit grew by 4%, from US\$1 836.8 million in January 2011, largely reflecting an increase of 6.3% in domestic loans and advances.

Credit to the private sector grew by US\$71.4 million (3.9%) during the month February 2011, reflecting an increase of US\$73 million in loans and US\$27.9 million in mortgage advances. Partially offsetting these increases were declines of US\$14.2 million and US\$5.5 million in bankers' acceptances and offshore loans, respectively.

Since the adoption of the multicurrency framework, credit to the private sector has predominantly been short term (overdraft

facilities), largely for working capital requirements and recurrent expenditures, with minimal amounts going towards capital funding. This nature of lending by banks is largely in line with the short term and transitory nature of deposits in the banking system.

Mortgage advances by the banking sector increased from US\$32.6 million in February 2010 to US\$84.8 million. The increase signifies improved lending by building societies towards low cost housing and home improvements.

Although high liquidity risk, partly due to limited inter-bank trading, continue to hamper the operations of banks, the loan to deposit ratio⁶ grew from 50.8% in February 2010 to 76.8% in February 2011.

6. This is calculated by dividing the credit to private sector by the total deposits excluding interbank deposits.

ECONOMIC DEVELOPMENTS

The Net Foreign Assets (NFA) position worsened by 5.5%, from a deficit of US\$208.5 million in February 2010 to a deficit of US\$219.9 million in February 2011.

The worsening in NFA, was driven by a US\$33 million reduction in foreign assets of banking institutions, coupled with an increase of US\$85.9 million in foreign liabilities.

The decline in foreign assets largely emanated from a decrease of US\$58.8 million in deposits of local banks held at banks abroad, while the increase in foreign liabilities was largely driven by a surge of US\$63.8 million in offshore loans.

In the absence of a reference rate on the market, interest rate variability among banks remains very high, with lending rates ranging from 12% to 30% per annum.

The current liquidity shortages, reflected by credit demand outstripping supply, has sustained the prevailing high rates on time deposits and loans. As at February 2011, most banks were quoting time deposit rates of above 10% per annum, and around 20% on lending rates. Mortgage rates were ranging from 5% to 30% per annum.

Inflation

Annual headline inflation decelerated from 3.5% in January, to 3.0% in February 2011, reflecting dissipating underlying inflationary pressures in the economy.

The slow down in annual inflation was driven by both food and non-food inflation, which eased from 6.8% and 2.2% in January, to 5.3% and 2.0%, respectively, in February 2011.

Major slowdown in non-food inflation occurred in the recreation and culture, alcoholic beverages and communications categories, while some seasonal factors pulled down food inflation.

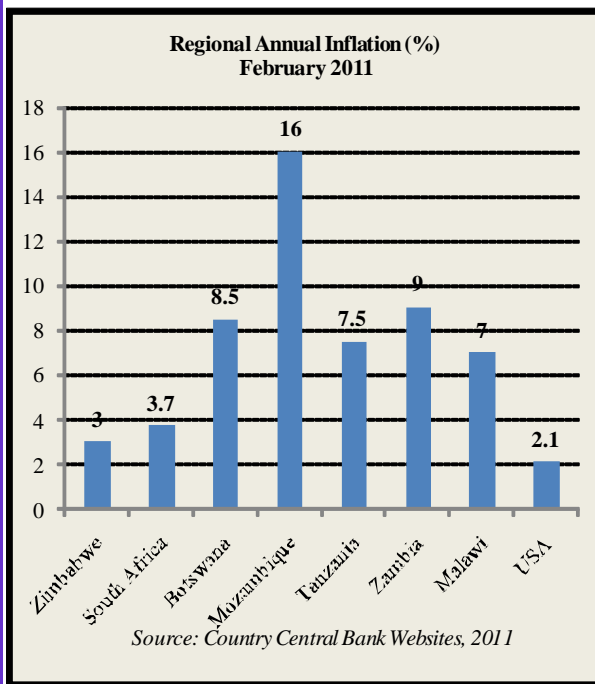

Monthly inflation for February 2011 declined to 0.5%, from 1.0% in January 2011, largely reflecting declines in both food and non food inflation. Food and non food inflation fell from 1.3% and 0.9% in January to 0.4% and 0.5% in February 2011, respectively.

ECONOMIC DEVELOPMENTS

The deceleration in month on month inflation suggest significant dampening of inflationary pressures during the month of February 2011.

The country's inflation remains relatively low, compared to regional averages.

In the short to medium term, however, inflation developments in the economy will be influenced by fluctuations of the South African rand, developments in the international oil prices, the pricing of domestic utilities and trends in world food prices.

National Payments System Developments

Card Systems

The total value of card based transactions increased by 5.9%, from US\$55.8 million in January 2011 to US\$59.1 million in February 2011. Of these card payments, 88.1% were processed through ATMs and 11.9% through Point of Sale (POS) machines.

Zimbabwe Electronic Transfer Settlement System (ZETSS)

The value of transactions processed through the RTGS system, known as Zimbabwe Electronic Transfer and Settlement System (ZETSS) decreased by 10% to US\$2 billion in February 2011, from US\$2.2 billion in January 2011.

Mobile and Internet Based Transactions

The total value of mobile and internet based transactions increased by 23.8%, from US\$23.5 million recorded in January 2011 to US\$29.1 million in February 2011.

Cheques

During the month under review, the volume of cheque transactions decreased by 12%, from 17 551 transactions recorded in January

ECONOMIC DEVELOPMENTS

2011 to 15 456 transactions in February 2011. The total value of cheques, however, increased from US\$4.2 million to US\$4.4 million for the same period.
