1. OVERVIEW

Growth in the global economy is estimated to have declined to 3.1% in 2016, from 3.2% in 2015, the weakest performance since the 2008/9 global financial crisis. Global economic activity is, however, projected, to pick up in 2017 and 2018, to 3.4% and 3.6% respectively. The policy paradigm shift in the US, favouring protectionism has brought uncertainty to global financial markets.

The country's real GDP growth rate is estimated at 0.6% for 2016. On a sectoral basis, growths are estimated for mining (6.9%); construction (3.5%); distribution, hotels and restaurants (1.7%); and manufacturing (0.3). Declines are, however, estimated for electricity and water (19%) and agriculture (3.7%), reflecting the impact of the drought.

Manufacturing sector activity showed some signs of recovery in the last quarter of 2016. According to the 2016 Confederation of Zimbabwe Industries Manufacturing Sector Survey, the weighted average capacity utilisation for the manufacturing sector increased from 34.3% in 2015 to 47.4% in 2016.

Similarly, most of the key minerals performed better in the last quarter of 2016, than the comparable period in 2015. In particular, gold output rose to 6 608 kg in the fourth quarter of 2016, compared to the 5 798 kg produced during fourth quarter of 2015.

On the external sector front, the country's exports earnings increased by 23.9% to

US\$1,071.1 million, largely on account of increases in tobacco exports (378.5%), ferro-chrome (100%) and semi-manufactured gold (6.3%). Imports declined by 1% to US\$1,432.8 million. Resultantly, the trade balance improved from a deficit of US\$646.4 million registered during the third quarter of 2016, to a deficit of US\$361.7 million in the fourth quarter.

Broad money supply¹ recorded an increase of 6.76%, in the fourth quarter of 2016, a stronger growth compared to 3.51% recorded in the third quarter. On a year-on-year basis, money supply grew by 19.20% to US\$5 680.5 million, from US\$4 765.4 million in December 2015.

The Zimbabwe Stock Exchange (ZSE) was bullish during the fourth quarter of 2016. Concomitantly, the industrial index increased by 45.57 points, from 98.96 points as at end September 2016 to 144.53 points as at end December 2016. Similarly, the mining index, rose by 31.90 points, from 26.61 points as at end September 2016, to 58.51 points as at end December 2016. Market capitalisation gained US\$1.3 billion, from US\$2.73 billion as at the end September 2016 to US\$4.01 billion as at the end December 2016.

The value of transactions processed through the National Payment Systems (NPS) increased by 11% to US\$17.49 billion in the fourth quarter of 2016, from US\$15.69 billion recorded in the third quarter. NPS transaction volumes also increased by 31% to 124.62 million in the fourth quarter of 2016, from 94.84 million in the third quarter.

¹ Under the multiple currency system, broad money is defined as total bank deposits less interbank deposits and also includes Bond notes and coins issued.

2. INTERNATIONAL ECONOMIC DEVELOPMENTS

The global economy was characterized by stagnant trade, subdued investment, and intensified policy uncertainty in 2016. Global growth is estimated to have fallen to 3.1 percent in 2016 from 3.2 percent in 2015, the weakest performance since the global financial crisis. Economic activity is, however, projected to pick up to 3.4 percent in 2017 and 3.6 percent in 2018.

Recovery in global growth stems from improvements in some large emerging market and low income economies. In the United States, Europe, China and Japan better prospects are expected to lift up growth. Notwithstanding the global recovery, vulnerabilities include rising antipathy toward trade and immigration, widespread high levels of public and private debt, the ongoing climate change which especially affects low-income countries; and continuing slow growth and deflationary pressures. In addition, non-economic factors in the form of geopolitical and political uncertainty in some regions are expected to adversely affect global recovery.

Growth in major advanced economies is estimated to have decelerated to 1.6 percent in 2016, from 2.1 percent in 2015, mainly on the backdrop of renewed policy uncertainties, weak external demand, and subdued productivity growth. The uncertainty associated with protectionist policies of the Trump administration in the United States and the United Kingdom's decision to leave the European Union (Brexit) could significantly influence the growth trajectory of advanced economies. Table 1 shows economic growth developments and the revised projections for

selected regions and countries for 2016 and 2017.

Table 1: Global Economic Growth & Outlook (%)

	Actuals		Estimate	Projections

Source: IMF World Economic Outlook Update (January 2017).

United States

The United States experienced a marked contraction in real GDP growth from 2.6 percent in 2015, to an estimated 1.6 percent in 2016. Growth was mainly held back by soft exports, a continued drawdown in inventories, and

deceleration in private investment. Activity picked up in the run-up to the November 2016 elections, with a further tightening of labour markets leading to rising wage growth.

The raft of measures from the new administration, such as proposals for corporate and personal income tax cuts; infrastructure spending; and shifts in trade (renegotiations of trade agreements), immigration, and regulation policies have brought uncertainty on the U.S. economic outlook which may have spill-overs to the rest of the world.

The unemployment rate remained slightly below 5 percent during the second half of 2016. While labour force participation could recover from current low levels, as workers return to the labour market.

Eurozone

Growth in the Euro Area slowed from 2 percent in 2015 to 1.7 percent in 2016, as both domestic demand and exports lost momentum. The region has been characterized by low confidence, following the United Kingdom's vote to exit the European Union (EU) in June 2016. The Eurozone's labour market and credit conditions continued to improve in 2016, with employment recovering from the pre-crisis levels. The region also experienced an improvement in lending flows, mainly due to the prevailing negative policy interest rates and large-scale asset purchase programs by the European Central Bank, which significantly led to a noticeable easing of borrowing costs.

The Eurozone had a slightly expansionary fiscal policy in 2016, mainly due to refugee related expenditures. Most countries are riddled with fiscal sustainability concerns. This, coupled with

uncertainty about the Brexit process, is expected to exert downward pressure on growth in 2017-18, on the United Kingdom in particular, and the Euro Area to a lesser extent. Growth in the Euro Area in 2017 is projected to slow marginally to 1.6 percent, from 1.7 percent in 2016, as the unwinding of the income boost associated with lower oil prices, increased policy uncertainties, and lingering banking sector concerns offset the benefits of more favourable financial conditions.

Japan

The Japanese economy is estimated to have grown by 0.9 percent in 2016 from 1.2 percent in 2015. This was on the backdrop of low investment. The Japanese economy experienced some improvements in private consumption, after two years of contraction. While labour shortages triggered a modest increase in wage growth, low inflation expectations and a rising share of part-time employment dampened the gains. The change of policy by the Bank of Japan from a quantitative target for government bond purchases to a more flexible approach aimed at stabilizing long term interest rates around zero, resulted in an appreciation of the yen during the first half on 2016.

Investments and profits were dampened in 2016, mainly due to the fact that Japanese exports are often denominated in destination currencies. The yen depreciated rapidly towards the end of the year, trimming most of its earlier gains. To support growth, the Japanese government postponed a planned consumption tax hike and a fiscal stimulus package, with new public spending amounting to 1.2 percent of GDP. This was expected to add around 0.3 percentage points to growth in 2017. Growth projections for 2017 and 2018 have been revised up to 0.8 percent and 0.5 percent, respectively.

The Japanese economy, however, remains constrained by heightened policy uncertainty in major trading partners and the shrinking and aging labour force.

Emerging Market and Developing Economies

Growth in emerging market and developing economies reached an estimated 4.1 percent in 2016. The weak global trade in 2016 was offset by some pick-up in domestic demand and generally mild financing conditions. Marked divergence between commodity exporters and importers continued, although with notable variations within each group. Reflecting these divergences, growth in commodity imports in 2016, accounted for almost the totality of the growth in emerging market and developing economies.

In Sub-Saharan Africa (SSA), growth prospects are expected to improve on account of normalization of conditions in large economies that experienced macroeconomic strains, primarily Nigeria, where higher oil production is projected due to security improvements. Growth in the region is projected to rise from 1.6% in 2016 to 2.8% and 3.6% in 2017 and 2018, respectively. Economic growth prospects for Zimbabwe are spurred by the good 2016/2017 agricultural season, with the national economy projected to grow by 3.7% in 2017.

The risks to global growth in the outlook period call for accelerated implementation of monetary, fiscal and structural policies tailored to country circumstances, in order to spur productivity and output.

International Commodity Price Developments

Prices of most international commodities continued to rise in the fourth quarter, rebounding from their lows in early 2016 and are expected to gradually recover in 2017. Precious metals, however, were subdued on the back of weak investment demand in response to a stronger dollar and high interest rates.

Crude oil prices which recorded strong quarterly gains, recovered from a low of US\$30 per barrel at the beginning of 2016, to about US\$50 by December 2016. The oil market continued to rebalance, as consumption rose, while non-OPEC supplies declined notably, in the United States.

The evolution of international commodity prices during the period under review is shown in Table 2.

Table 2: International Commodity Prices

	September 2016	December 2016	% Change
Gold (US\$/oz)	1,334.85	1,219.39	-8.60
Platinum (US\$/oz)	1,085.10	941.24	-13.30
Copper (US\$/ton)	4,771.18	5,268.22	10.40
Nickel (US\$/ton)	10,259.12	10,793.93	5.20
Crude Oil (US\$/barrel)	47.01	51.74	10.10

Source: Bloomberg, BBC, Kitco 2016

Brent Crude Oil

Brent crude oil prices registered strong gains during the fourth quarter of 2016, picking by 10.1% to average US\$51.74/barrel. This followed agreements between Organization of Petroleum Exporting Countries (OPEC) and non-OPEC members to curb output in the first half of 2017, as part of a collaborative strategy to revive the global oil industry.

Figure 1 shows the monthly evolution of crude oil prices for the period January to December 2016.

Figure 1: Brent Crude Oil Prices US\$/Barrel

Source: Bloomberg, 2016

The oil market continued to rebalance amid steady demand growth, while sharply lower investment in non-OPEC countries led to lower production, notably in the U.S. shale oil sector.

Base Metals

Base metals prices continued on a positive trajectory for the third successive quarter due to tightening supply and strong demand in China, the world's largest base metal consumer. Notably, copper prices registered significant

growth, on falling inventories and expectations of higher demand. Furthermore, expectations that global demand would accelerate, particularly in the US, following announcements of stimulus plans by the U.S, supported base metal prices during the period under review.

Resultantly, quarterly average copper and nickel prices edged up by 10.4% and 5.2% to US\$5,268.22/tonne and US\$10,793.93/tonne, respectively. Figure 2 shows the international monthly price developments for base metals.

Figure 2: Base Metal Prices (US\$/tonne) January to December 2016

Source: Bloomberg, 2016

The World Bank projects base metals prices to increase by 11 percent in 2017, due to stronger global demand, tighter environmental constraints and policy action that limits supply.

Gold and Platinum

Precious metal prices were subdued in the fourth quarter of 2016, on account of falling investment demand, in response to a strengthening US dollar and high real interest rates. As widely expected, the U.S. Federal Reserve raised interest rates in December 2016, with further rate increases expected in 2017. Rising interest rates normally have negative implications for precious metal prices, as investors seek yield-bearing assets. In addition, physical gold and platinum demand was very weak in 2016, particularly in the two largest consuming countries, India and China, where shifting consumer tastes have reduced the demand for jewellery.

The price of gold fell by 8.6%, from its third quarter average to US\$1,219.39/oz in the fourth quarter of 2016. On the other hand, platinum prices dropped by 13.3%, to an average of US\$941.24/oz in quarter four, on the back of falling investment demand and weak physical demand. Figure 3 shows trends in precious metal prices.

Figure 3: Precious Minerals Prices

Source: Bloomberg, 2016

Merchandise Trade Developments

Total merchandise trade amounted to US\$2,503.8 million, during the fourth quarter of 2016, representing an 8.3% rise from US\$2,312.5 million recorded during the fourth quarter of 2015 (see Figure 4). On a quarterly basis, total merchandise trade rose by 30.4%, from US\$1,919.9 million in the third quarter of 2016 to US\$2,503.8 million in the fourth quarter.

Figure 4: Total Merchandise Trade –Q1 to Q4 2015 and 2016 (US\$ million)

Source: Zimstat, 2016

Merchandise Export Developments

Over the period October to December 2016, merchandise exports stood at US\$1,071.1 million, a 23.9% increase from the US\$864.5 million realized over the same period in 2015, as shown in Figure 5.

Figure 5: Merchandise Exports – Q1 to Q4 2015 and 2016 (US\$ millions)

Source: Zimstat, 2016

Compared to the third quarter of 2016, merchandise exports increased by 68.2% in the fourth quarter of 2016, largely on account of increases in exports of tobacco, ferro-chrome and semi-manufactured gold exports.

Flue-cured tobacco, gold, nickel, ferrochrome and diamonds dominated the country's export basket, contributing about 86% of total export earnings between October and December 2016, as shown in Table 3.

Table 3: Exports Classified by IHS Code

Product	3 rd Quarter 2016 (US\$m)	4 th Quarter 2016 (US\$m)	4 th Quarter 2016 Share of Total (%)
Flue-cured tobacco	106.8	511.1	47.7
Gold	237.6	252.6	23.6
Nickel ores and concentrates	80.5	84.6	7.9
Ferro-chrome	26.1	52.3	4.9

Cane sugar	30.3	12.6	1.2
Platinum unwrought	14.0	14.9	1.4
Granite	9.0	5.9	0.5
Other	111.8	117.6	11.0
Total:	636.8	1,071.1	100.0

Source: Zimstat, 2016 & RBZ computations, 2016

Major Merchandise Export Destinations

In terms of destination, 99% of the country's merchandise exports went to South Africa, Mozambique, the United Arab Emirates, France, Zambia, Belgium and Kenya during the fourth quarter of 2016. Notably, 82% of the merchandise exports were destined for South Africa; followed by Mozambique; 8% and the United Arab Emirates, 4% (See Figure 6). A total of 92% of the country's exports were absorbed in the SADC region.

Figure 6: Major Merchandise Export Destinations (% Share)

Source: Zimstat, 2016 & RBZ calculations, 2016

Exports to the other destinations of the world constituted about 1% of the total exports in the fourth quarter of 2016.

Merchandise Import Developments

Total merchandise imports for the fourth quarter of 2016 amounted to US\$1,432.8 million, 1.0% lower than in the comparative quarter in 2015, as shown in Figure 7.

Figure 7: Merchandise Imports (US\$ million)

Source: Zimstat, 2016

The country’s import bill declined in the last quarter of 2016, compared to a similar period in 2015. On a quarter-on-quarter basis, however, merchandise imports, went up by 11.7%, from US\$1,283.1 million in the third quarter of 2016 to US\$1,432.8 million in the fourth quarter.

The country’s major imports during the period October to December 2016, mainly comprised of fuels (diesel and petrol), cereals (maize, rice, and wheat), electricity, soya bean oil and medicines.

Major Import Sources

During the fourth quarter of 2016, the country sourced its imports mainly from South Africa, 43.7%; Singapore, 19.8%; China, 7.2%; Zambia, 3.2%; Mozambique, 3.0% and India, 2.3% as shown in Figure 8.

Figure 8: Major Merchandise Import Sources (% Share)

Source: Zimstat, 2016 & RBZ Calculations, 2016

The country's merchandise imports from South Africa mainly constituted capital, intermediate and consumer goods, while imports from Singapore were dominated by diesel and petrol.

Trade Balance

The 2016 fourth quarter merchandise trade developments resulted in the improvement of the trade balance from a deficit of US\$646.4 million in the third quarter of 2016, to a deficit of US\$361.7 million in the fourth quarter, as shown in Figure 9. The narrowing of the current account deficit, was largely attributed to a combination of factors, inter alia, import substitution, coupled with the import compression measures introduced by Government in 2016.

Figure 9: Trade Balance (US\$ million)

Source: Zimstat, 2016 & RBZ Computations, 2016

3. DOMESTIC ECONOMIC DEVELOPMENTS

REAL SECTOR DEVELOPMENTS

The economy is estimated to have registered a real GDP growth rate of 0.6% in 2016. However, the projected growth for 2017 is bullish at 3.7%, following a good agricultural season.

Agriculture

The agriculture sector is estimated to have declined by -3.7% in 2016, compared to initial projections of -9.9%. This was on account of a better than expected 2015/16 agricultural season, following the devastating drought during the 2014/2015 season.

Wheat

The area under wheat declined from 14 789 hectares in 2015 to 14 220 hectares in 2016. This was, in large part, due to concerns on the cost and availability of electricity during the planting period for the wholly irrigated crop.

Tobacco

Statistics from the Tobacco Industry and Marketing Board (TIMB), showed that the area under tobacco for the 2016/17 season increased by 12.5% to 107 035 hectares, compared to 95 160 hectares planted in the 2015/16 season.

The highly successful 2015/16 season spurred the increase in tobacco planting, as farmers anticipated a good rainfall season as well as good prices on the market. Further, the 5% export incentive scheme led to an increase in hectareage put under tobacco in 2017. The number of registered tobacco farmers for the 2016/17 season also increased by 15%.

Cumulative Tobacco sales in 2016 significantly surpassed the projected performance, despite the lower hectarage. Table 4 shows a comparison of the performance of the 2015 and 2016 marketing seasons.

Table 4: Cumulative Tobacco Sales: 2015 and 2016 Tobacco Selling Season.

	2015	2016	Variance (%)
Total Quantity Sold (million Kgs)	198.9	202.3	1.7
Total Value (US\$ million)	586.4	595.9	1.6
Average Price (US\$)/Kg	2.95	2.95	0

Source: TIMB, 2017

Cotton

Cotton output declined significantly from 104 935 tonnes in 2015, to less than 30 000 tonnes in 2016. The decline was due to the severe drought conditions that affected the establishment of the crop at the onset of the season. General apathy by farmers, following years of poor prices, resulted in the breaking down of the hitherto successful contract arrangements with cotton merchants and ginners.

For the 2016/17 season, five contractors were licensed and they intend to finance about 550 000 hectares of the crop, to the tune of US\$53 million. In addition, Government financing through a three year free input programme is expected to boost production, and set the crop on a recovery path. The parastatal,

Cottco, one of the licenced contractors, is implementing the Government input schemes in this endeavour.

Maize

A total of 100 425 hectares had been planted under the Command Agriculture programme by end December 2016. Table 5 shows the status of implementation of the Command Agriculture programme as at 31st December 2016.

Table 5: Command Agriculture Performance as at end December 2016.

	Dryland	Irrigated	Total
Contracted	175 191	71811.3	247 002
Tilled	108 161	63 299	171 460
Planted	52 587	47 837	100 425

Source: Ministry of Agriculture and Irrigation Development, 2017

Cattle

Due to the improvement in pastures, cattle slaughtered in the formal sector declined by 9.6%, from 76 650 head in the third quarter to 69 306 in the fourth quarter of 2016, as shown in Figure 10. The decline could also be attributed to farmers withholding their cattle for draft power, as the cropping season approached.

The forced destocking in 2016 partly resulted in a 11.3% annual increase in the number of cattle slaughtered to 284 805 in 2016, from 255 918 beasts in 2015.

Figure 10: Formal Sector Quarterly Cattle Slaughters

Source: Ministry of Agriculture, Mechanization and Irrigation Development

The Cold Storage Company contributed 7% of the cattle slaughters, as a result of operational challenges at the State Owned Enterprise and competition from private abattoirs.

Sheep and Goats

A total of 5 094 sheep and goats were slaughtered at formal abattoirs in the fourth quarter of 2016, bringing the cumulative slaughters to 24 946 in 2016. The 2016 output was lower than the 25 832 animals slaughtered in 2015.

On a quarterly basis, sheep and goat slaughters declined by 22%, from the 6 935 slaughtered in the third quarter of 2016 to 5 094 slaughters in the fourth quarter (see Figure 11). The stock retentions could also be indicative of farmers’ optimism on the quality of grazing pasture and water availability for livestock.

Figure 11: Formal Sector Quarterly Sheep and Goats Slaughters

Source: Ministry of Agriculture, Mechanization and Irrigation Development

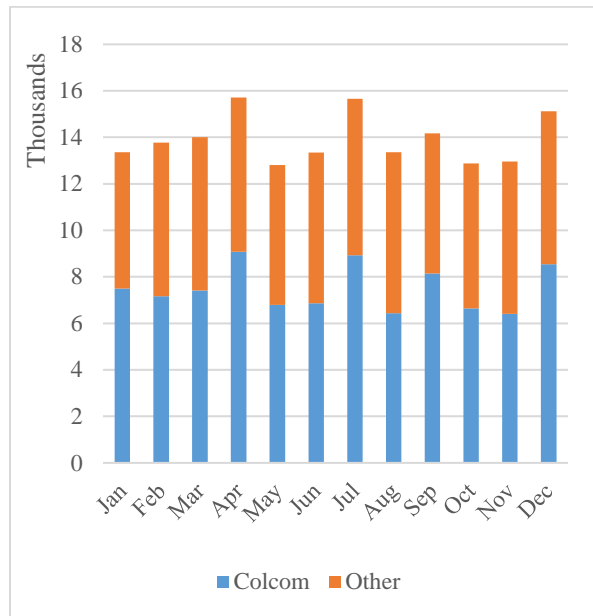

Pigs

The pig industry, which has been facing viability challenges owing to high costs of stockfeeds, recorded an increase in output, as farmers destocked and reduced the parent stock. Against this background, annual slaughters in the formal sector increased by 20%, from 139 183 pigs in 2015 to 167 166 pigs in 2016. Colcom accounted for over 54% of the slaughters.

On a quarterly basis, however, pig slaughters declined by 5% from 43 191 in the third quarter of 2016, to 40 964 in the fourth quarter.

Figure 12 shows the monthly performance of Colcom relative to other abattoirs in 2016.

Figure 12: Monthly performance of Colcom relative to other abattoirs in 2016.

Source: Ministry of Agriculture, 2016

Dairy

Milk output decreased marginally to 16.72 million litres during the fourth quarter of 2016, from 16.78 million litres in the previous quarter. Year-on-year milk output increased by about 13.6%, from 57.5 million litres in 2015 to 65.4 million litres in 2016, as shown in Table 6.

Table 6: Quarterly Milk Output in 2015 and 2016

	2015	2016	Variance %
Q1	13.41	15.93	18.81
Q2	14.20	15.91	12.08
Q3	15.00	16.79	11.94
Q4	14.94	16.73	11.99
Total	57.54	65.36	13.59

Source: Ministry of Agriculture, 2016

The increase in milk output was in line with the sector’s targeted annual growth of 12 percent, under the ongoing dairy herd rebuilding programme being spearheaded by the Zimbabwe Association of Dairy Farmers (ZADF). Apart from acquisition of heifers and cows, the Dairy Revitalization Strategy includes the training and capacitation of farmers, as well as the sharing and fusion of knowledge and expertise among them.

Mining

During the last quarter of 2016, most of the key minerals performed better than the comparable period in 2015, with the exception of diamonds and coal. Table 7 shows quarterly production statistics for selected minerals in 2015 and 2016.

Table 7: Quarterly Production Statistics

	Q4 2015	Q2 2016	Q3 2016	Q4 2016

Source: MOFED, RBZ, Ministry of Mines, Chamber of Mines, 2017

Gold

Gold output rose to 6 608 kg, in the fourth quarter of 2016, compared to 5 798 kg produced in the fourth quarter of 2015. On quarterly basis, gold output increased by 14.3%, from 5 779kg in

the third quarter of 2016. The increase was mainly attributed to increased throughput from primary producers, small scale producers and PGM activities. The increased deliveries of gold to Fidelity Printers and Refiners (FPR) largely benefited from the increased frequency of monitoring and auditing of producers by the gold mobilization taskforce that managed to plug leakages. In addition, limited power outages during the fourth quarter of 2016 also enhanced gold production.

In terms of sectoral contributions, small scale producers surpassed large scale producers for the first time in the history of gold production. Small scale producers delivered a total of 3 163 kg during the fourth quarter of 2016, compared to 2 230 kg produced during the same period in 2015. Large scale miners produced 2 959 kg, compared to 2 935 kg during the same period, as shown in Figure 13.

Figure 13: Gold Production.

Source: Fidelity Printers and Refineries, Chamber of Mines 2016

Cumulative gold output stood at 22 747kg in 2016, 13.6% more than the 20 023kg produced in 2015.

Platinum

Platinum output stood at 4 279 kg in the fourth quarter of 2016, up from 3 524 kg produced in the same quarter of 2015. On a quarterly basis, platinum output registered a 49.5% increase, from the 2 863kg produced in the third quarter of 2016. The production of the Platinum Group Metals (PGMs) largely benefitted from increased mining and milling activities at Zimplats, following the re-opening of the furnace that was shut down in July 2016. In addition, there was also a ramp up in production by the other primary producers.

Cumulative output increased to 15 110 kg in 2016, from the 12 564 kg registered during the same period in 2015. Figure 14 shows the quarterly platinum output and average international prices for 2015 and 2016.

Figure 14: Quarterly Platinum Output (Kg) and Average International Prices (US\$/ounce)

Source: Chamber of Mines, 2016

Diamonds

Diamond output, which has been declining since the first quarter of 2016, stood at 299 908 carats in the fourth quarter of 2016, compared to 1 041 279 carats produced during the same period in 2015, as shown in Figure 15. On a quarterly, basis diamond output declined by 20.4%, from 361 084 carats in the third quarter of 2016.

Figure 15: Quarterly Diamond Production (Carats)

Source: Ministry of Mines and Mining Development

The decline in diamond production is attributable to the transitional challenges involving the consolidation of former diamond companies into one State company, the Zimbabwe Consolidated Diamond Company (ZCDC). Diamond production has thus not yet been restored to its historical potential. Figure 16 shows the quarterly diamond production during 2016.

Figure 16: Quarterly Diamond Output by Producer for 2016 (Carats)

Source: Ministry of Mines and Mining Development

Nickel

Total nickel output was 4 543 tonnes in the last quarter of 2016, with 43% coming from primary production and the remainder from PGMs. This compares favourably to the 4 135 tonnes produced during the same period in 2015 and the 4 099 tonnes produced in the third quarter of 2016.

The increase in nickel output was largely driven by increased activities by both the primary and secondary producers. Further, the improvement in international prices of the metal, to an average of US\$10 787 per tonne during the fourth quarter of 2016, from US\$10 262 per tonne in the third quarter, also contributed to the increased output.

Figure 17 show trends in nickel output and prices in 2015 and 2016.

Figure 17: Quarterly Nickel Output (tonnes)

Source: Chamber of Mines, 2017

Cumulative nickel output rose to 17 743 tonnes in 2016, a 10% increase from the 16 633 tonnes produced in 2015.

Coal

Coal output stood at 673 793 tonnes during the period under review, 44% down from the 1 201 630 tonnes produced in the comparable period of 2015 (see Figure 18).

On a quarterly basis coal output declined by 10.4%, from 743 798 tonnes produced during the third quarter of 2016 to 673 793 tonnes produced in the fourth quarter.

Figure 18: Quarterly Coal Output and Average Coal Prices (US\$/t)

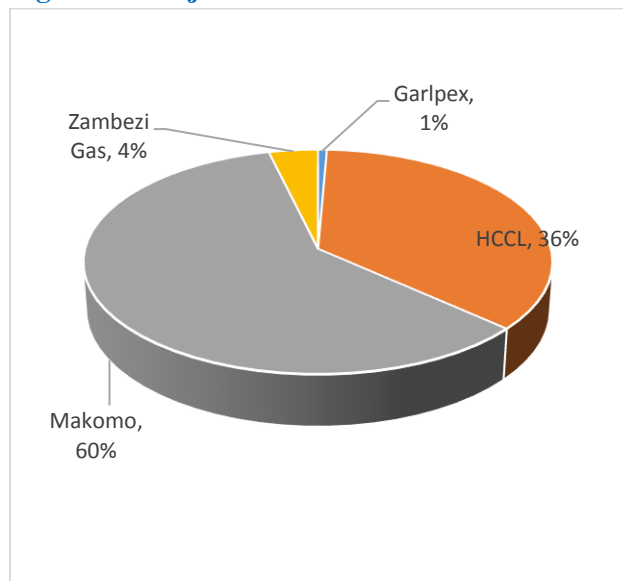

Source: Ministry of Mines and Mining Development, 2017

Coal production was adversely affected by weak demand in the domestic economy, coupled with the unresolved challenges relating to the debt overhang, undercapitalisation and non-availability of consumables. The challenges relating to plant and equipment maintenance at Hwange Colliery and non-payment for deliveries by key consumers also weighed down production.

Cumulatively, coal output amounted to 2,701,719 tonnes in 2016, down from 4,336,193 tonnes produced in 2015, with Makomo, the major producer contributing about 60% to total production (see Figure 19).

Figure 19: Major Coal Producers in 2016

Source: Ministry of Mines and Mining Development, 2017

Manufacturing

The manufacturing sector showed some signs of recovery in 2016, as demonstrated by the increase in capacity utilisation in some sub-sectors.

Government’s continued efforts in assisting the sector through implementation of policy measures and strategies which facilitate industrial development, as well as reorienting the productive sectors of the economy towards export production, has helped ease some of the challenges. The measures have begun to yield positive results in some sub-sectors, with some companies having been resuscitated.

Capacity Utilisation

According to the Confederation of Zimbabwe Industries (CZI) Manufacturing Sector Survey report, the weighted average capacity utilisation in the manufacturing sector increased from 34.3% in 2015 to 47.4% in 2016, reflecting nascent recovery in the sector.

Figure 20: Manufacturing Sector Capacity Utilization

Source: CZI, 2016

Success stories were recorded in some sub-sectors such as the oil expressers, in which capacity utilisation improved from as low as 10% capacity in 2015 to 90% in 2016. The pharmaceutical sub-sector also witnessed a growth in capacity utilisation, from 30% in 2015 to 60% in 2016.

Government intervention, in respect of import containment measures, as well as measures to improve the ease of doing business, has yielded some positive results in some sub-sectors of the manufacturing sector.

Table 8 shows capacity utilization in selected sectors.

Table 8: Average Capacity Utilisation in 2016

Sector	Capacity Utilisation
Food-stuffs	56.1%
Drink and Tobacco	52.4%
Clothing and Footwear	46%
Chemical and Petroleum	43.6%
Non Metallic Mineral Products	57.5%
Paper, printing and packaging	52.9%
Transport Equipment	45%
Wood and Furniture	54.8%

Electricity

Electricity generated and sent out by major power stations declined from 1 758.25 GWh in the third quarter, to 1 544.79 GWh in the fourth quarter of 2016. The cumulative power output from the major power stations stood at 6 779.18 GWh, 6.5% below the targeted output of 7 250.79 GWh in 2016 and 26.4% lower than the output generated in 2015.

Figure 21: Quarterly Electricity Generation (GWh)

Source: Zimbabwe Power Company, 2017

The decline in power generation in 2016 was, in large part, a result of water rationing at Lake Kariba, by the Zambezi River Authority (ZRA), and low coal stock levels at Munyati and Bulawayo Thermal Power Stations.

The Zimbabwe Power Company is, however, working on a number of projects to increase the country's electricity generation capacity, which include the following, among others;

- i. Kariba South Extension project, has moved to 66 percent completion level in the fourth quarter, from 58 percent in the previous quarter;
- ii. Hwange Power Station Expansion project, with a loan agreement between the Government of Zimbabwe and Exim Bank of China and a limestone supply agreement between Hwange Electricity Supply Company (HESCO) and PPC, which were both signed during the fourth quarter;

- iii. The Deka Pump Station and pipeline, which is undergoing assessment of the costs of engineering, procurement and construction; and
- iv. Batoka Gorge Hydro Electric Scheme, whose environmental impact assessment studies and engineering feasibility studies are being finalized.

The current good rains are also expected to increase electricity generation at Kariba and other small hydro stations.

4. INFLATION DEVELOPMENTS

Inflation remained in negative territory throughout 2016, although it has been on a sustained increase during the last quarter of 2016.

Annual headline inflation rate accelerated from -1.33% in September 2016 to -0.93% in December 2016. The increase in inflation during the fourth quarter was largely driven by food items. Annual inflation averaged -1.1% during the last quarter of 2016, compared to -1.4% in the third quarter.

Figure 22: Quarterly Inflation Profile (%)

Source: ZIMSTAT, 2017

Annual Food Inflation

The year-on-year food inflation also accelerated from an average of -2.9% in the third quarter of 2016, to an average of -1.0% in the fourth quarter, largely driven by bread and cereals, meat, vegetables and milk; cheese and eggs, among others. The increase in the prices of cereals could be attributed to shortages of grain in some areas during the last quarter of 2016. Likewise, the increase in meat prices during the last quarter of 2016, is reflective of dwindling supply as farmers rebuild their herd, following forced destocking due to drought in the previous agriculture season.

Annual Non-Food Inflation

In the fourth quarter of 2016, annual non-food inflation decelerated to an average of -0.8%, from an average of -0.6% in the third quarter. The decline was mainly driven by education; restaurants and hotels; housing, water, electricity, gas and other fuels; and health, among others.

Regional Inflation Developments

Zimbabwe was the only country with negative inflation in the region, during the fourth quarter of 2016, as shown in Table 9.

Table 9: Annual Inflation rates for selected SADC Member Countries and USA (%)

	Zim	SA	Bot	Moz	Tan	Zam	Mal	USA
Jun 2016	-1.4	6.3	2.7	19.7	5.5	21.0	22.6	1.0
Sept 2016	-1.3	6.1	2.8	24.9	4.5	18.9	21.2	1.5
Dec 2016	-0.9	6.8	3.0	25.3	5.0	7.5	20.0	2.1

Source: Country Central Bank Websites, 2017

Inflation Outlook

Quarterly annualized inflation, which has remained in negative territory since the first quarter of 2016, accelerated from -2.2% in September 2016, into positive territory, at 0.7% in December 2016. The rising trend in quarterly annualised inflation, points to a move out of deflation which is positive for economic growth.

Figure 23: Quarterly Annualized Inflation Profile 2016

Source: RBZ January 2017

In the outlook period, inflation is expected to range between 2% and 3% for 2017. Developments in the domestic economy will continue to be influenced by movements in international oil prices, the US\$/rand exchange rate, domestic and regional food output, as well as the level of aggregate demand in the economy.

5. MONETARY DEVELOPMENTS, INTEREST RATES AND FINANCIAL MARKETS

Monetary Developments

In the fourth quarter of 2016, broad money supply recorded an increase of 6.76%, a stronger growth compared to 3.51% recorded in the third quarter. On a year-on-year basis, money supply grew by 19.20%, to US\$5 680.5 million from US\$4 765.4 million in December 2015.

The growth in money supply was reflective of the quarterly expansion in demand deposits, 10.84%; savings deposits, 6.59%; and under 30-days deposits, 2.36%. Partially offsetting these increases was an 8.49% decline in over 30-days deposits. Deposits mainly emanated from financial organizations, the services and distribution sectors and individuals.

Figure 24 shows annual broad money supply in nominal terms as well as growth rates.

Figure 24: Annual Broad Money Supply Growth Rates and Levels

Source: RBZ, 2016

Domestic Credit

Net domestic credit increased by 9.49%, from US\$5 829.1 million in the third quarter to US\$6 382.3 million in the fourth quarter of 2016.

Credit extended to the private sector increased by 3.63% to US\$3 648.2 million in the fourth quarter of 2016, from US\$3 520.3 million in the third quarter.

Outstanding private sector credit was channelled to households, 22.40%; agriculture, 15.95%; services, 15.19%; manufacturing, 13.81%; distribution, 11.38%; financial organisations and investments, 11.97%; mining, 4.92%; transport and communications, 2.06%; and construction, 1.51%.

STOCK MARKET DEVELOPMENTS

Reflecting renewed investor appetite during the last quarter of 2016, the Zimbabwe Stock Exchange (ZSE) recovered from the previous quarter losses. Resultantly, the local bourse gained US\$1.3 billion in market capitalization. This reflected a 47.07% increase, from US\$2.73 billion at the end of September 2016 to US\$4.01 billion as at 31st December 2016.

Figure 25: Market Capitalisation

Source: Zimbabwe Stock Exchange, 2016

Industrial Index

During the quarter under review, the industrial index increased by 45.57 points, from 98.96 points as at end September 2016 to 144.53 points at the end of the last quarter of 2016. On a year-on-year basis, the industrial index increased by 29.68 points, from 114.85 points in 2015 as show in Figure 26.

Figure 26: Zimbabwe Stock Exchange Indices

Source: Zimbabwe Stock Exchange, 2016

Mining Index

The mining index maintained an upward trajectory, largely backed by significant investor demand in RioZim and Bindura Nickel Corporation (BNC) shares. This followed plans by the two mining houses to ramp up production, after significant capital expenditure in the past two years.

The resources index increased by 31.90 points, from 26.61 points as at end September 2016, to close the last quarter of 2016 at 58.51 points. On a year-on-year basis, the mining index increased by 34.79 points.

Market Turnover

During the fourth quarter of 2016, market turnover volume and value increased by 321.82% and 125.59% to 703.7 million shares and US\$72.1 million, respectively. This was due

to improved trading activity in mid-cap and heavyweight counters.

Foreign investor bearish sentiments persisted as reflected by the notable capital outflows of US\$16.2 million in the quarter ended 30th September 2016 and US\$39.8 million in the last quarter of 2016.

In the short to medium term the market is anticipated to maintain the steady positive trend. As a result, activity is expected to be concentrated in the wealth preserving blue chip counters, which are deemed safe havens by investors.

Figure 27: Market Turnover Value

Source: Zimbabwe Stock Exchange, 2016

6. PAYMENT, CLEARING AND SETTLEMENT ACTIVITIES

The value of transactions processed through the National Payment Systems increased by 11% to US\$17.49 billion in the fourth quarter of 2016, from US\$15.69 billion recorded in the third quarter of 2016. Similarly, transaction volumes also increased by 31%, to 124.62 million in the

fourth quarter of 2016 from 94.84 million in the third quarter.

Cheque and ATMs payment streams recorded decreases in values during the fourth quarter of 2016, whilst RTGS, POS, Internet and mobile registered increases. The corresponding volumes for all payment streams recorded increases, with the exception of the cheque payment stream which registered a decrease in the fourth quarter of 2016, compared to the third quarter.

Table 10 provides the statistical information on various payment streams for the fourth quarter 2016.

Table 10: Consolidated Transactional Activities

TRANSACTIONAL ACTIVITIES				
Payment Stream	Third quarter ending 30 Sep 2016	Fourth quarter ending 31 Dec 2016	Change from last quarter	Proportion

Large Value Payments Zimbabwe Electronic Transfer and Settlement System

The value of transactions processed through the RTGS system increased by 12% to US\$13.63 billion during the fourth of 2016, from US\$12.22 billion recorded in the third quarter. Transaction volumes registered an increase of 34% to 1 054 516 in the fourth quarter of 2016, from 784 834 in the third quarter as shown in Figure 28.

Figure 28 : RTGS Values and Volumes

Source: RBZ, 2017

SWIFT Foreign Currency Transactions

SWIFT foreign currency payments decreased by 8% to US\$1.00 billion for the fourth of 2016, from US\$1.09 billion in the third quarter. During the same period, SWIFT foreign currency receipts also decreased by 19% to US\$0.94 billion from US\$1.16 billion.

Net foreign currency outflows amounted to US\$61.49 million during the quarter under

review. Figure 29 shows trends in SWIFT foreign currency transactions.

Figure 29: SWIFT Cross Border Transactions

Source: RBZ, 2016

Over the Counter Cash Withdrawals

The value of cash withdrawals decreased by 18%, from US\$1.54 billion during the third quarter of 2016 to US\$1.26 billion recorded in the fourth quarter. The corresponding volumes, however, increased by 17% from 4.25 million in the third quarter to 4.96 million in the fourth quarter, as shown in Figure 30.

Figure 30: Over the Counter Cash Withdrawals.

Source: RBZ, 2016

Collateral²

The value of collateral increased to US\$29.40 million in the fourth quarter of 2016, from US\$17.26 million recorded in the third quarter, as shown in Figure 33.

Figure 33: Total Collateral

Source: RBZ, 2016

Access Points and Devices

There was a general increase in access points and access devices between the third and fourth quarters.

Mobile banking agents increased to 40 590 in fourth quarter of 2016 from 37 131 reported in the third quarter of 2016.

The POS population increased to 32 629 during the fourth quarter of 2016, from 24 110 in the third quarter.

Table 11 shows statistics for access points and devices for the third quarter of 2015, as well as for the third and fourth quarters of 2016.

Notes

1. Table revised, to separate weighted lending rates for individuals and corporate bodies.
2. Nominal Lending Rates depict the range of rates quoted by banks.
3. Lending rates exclude rates on staff loans.

1. The range of rates quoted by banks during the period.
2. Three (3) months deposit rates revised to exclude rates on inactive or dormant accounts.
