2. CLEARING AND SETTLEMENT ACTIVITY

The total value of transactions processed through the National Payment System (NPS) declined from US\$1 573 million in the previous week, to US\$1 116 million during the week ending 5th December 2014. This was largely attributable to a 40% decline in transactions processed through the Real Time Gross Settlement (RTGS) system, from US\$1 367 million to US\$823 million. RTGS volumes registered a 4% decline, from 47 549 in the previous week, to close the week under review at 45 684.

Gold

Gold prices firmed by 0.3% to close the week under review at US\$1 198.45/oz, from a weekly average of US\$1 194.65/oz recorded in the previous week. This was due to a modest increase in oil prices mid-way through the week, which boosted the demand for the precious metal as an inflation-hedge. Furthermore, expectations of monetary easing in Europe and China, as well as a strengthening US dollar also increased the demand for the yellow metal.

Platinum

Platinum prices gained by 0.5% from a weekly average of US\$1 217.30/oz recorded in the previous week, to US\$1 223.40/oz during the week of analysis. The increase was underpinned by a positive US economic outlook, following reports that the economy had expanded in the third quarter of 2014.

Copper

Copper prices registered a 2.8% decline during the week under review to close at US\$6 455.80/ton, amid concerns of a weak demand outlook in China, the world's largest consumer of the metal.

Nickel

Nickel prices firmed by 1%, from a weekly average of US\$16 302.00/ton recorded in the previous week, to an average of US\$16 460.00/ton. This was on the back of dwindling supply, as Indonesia stopped exports of unprocessed ore early this year.

Crude Oil

Crude oil prices slumped by 8.5% from US US\$76.80/barrel in the previous week, to an average of US\$70.28/barrel during the week of analysis. This followed rising supply, backed by rising U.S. shale oil output and the Organization of Petroleum Exporting Countries' decision to maintain their production quota.

4. EQUITY MARKETS

During the week ending 5th December 2014, bearish sentiment persisted on the Zimbabwe Stock Exchange as investors remained skeptical due to uncertainties emanating from political developments as the ruling party held its elective congress. The industrial index shed 3.09 points to close at 168.36 points. The resources index, however, marginally recovered from previous losses and gained 3.20 points to close the week under review at 67.59 points.

The industrial index was largely weighed down, by losses in Turnall (26.67%); Mash Holdings (16.67%); Econet (4.55%); Delta (2.66%) and PPC (2.27%).

Market Turnover and Volume

Despite negative trading that characterized the bourse, market turnover increased by 14.13% from US\$11.5 million in the previous week, to close the week under review at US\$13.2 million. The increase in market turnover was boosted by a special bargain in Dawn which saw 284 272 687 million exchanging hands, during the period under review. The total volume of shares traded amounted to 302.81 million during the week under review, compared to 68.35 million shares in the previous week.
